1852

Mr Hines agrees to Rent Mr Clements
his farm for one year from the 20th Nov 1856
for 1/3 the entire crop, together with as
much fruit as Hines family may require
H also reserves to himself the right to build a
house any where on the farm with three acres
of land attached or detached, also the
right to gather stones off the farm for the purpose
of building said house

## Syrup of Orange Peel

oz of recently dried orange Peel is reduced
powder and lixiviated with a mixture of 2 parts
Alcohol & 1 of Aqua until six fluidounces are
tained. This tincture is then poured over and mixed
ell with 32 oz (Av) of sugar in coarse powder &
read on papers until the alcohol is evaporated
hen this is accomplished the aromatized sugar
made into syrup with 16 fluidounces of Aqua

# Fluid Ext Rhei

R Rad Rhei ℥viij
Sac Alb . ℥v
Alcohol dilut Oij

Reduce to coarse powder & mix with equal bulk coarse clean sand moisten thoroughly, with diluted Alcohol so as to form a pasty mass, le stand for an hour or two. Introduce into displacement apparatus, cover with a piece paper or cloth & pour on the rest of the menstru carefully until the passing liquid has but little or taste of the root. The concentrated liquor thus obtained is evaporated in a water bath until i measures 5½ fluid ounces, the sugar added & when dissolved the whole should measure The strength of this is 60 grs to the tea spoon

Fluid Ext Valerian

℞ Rad Valerian ℥viij
Spr Vini Rect ℥viij
Sulph Ether — ℥iv.

Having finely powdered the root, place it in the
strument as the Ether & Alcohol do not
terfere in their action, Mix and obtain by
reful percolation as strong a tincture as can be made
hich may be determined by the liquid ceasing to
quire additional color or taste remove the last
rtions by water and set the solution aside in an open
ish in a warm room to evaporate which it is
llowed to do until all the ether & half the alchol
e gone) the remainder then amounts to f℥iv
f a greenish color, oily containing all the
cid. We then proceed by water and if the first
rtion is mixed with any of the preceding menstruum
hould be submitted to a gentle heat to expel it,
he first 8oz of the cold effusion are set aside
e root is finally exhausted with cold water

which is to be determined mainly by the taste, Evaporate this by water bath to ℥iv and finally mix all these solut The product should be Oj – The dose is a tea spoonful, it is best to commence with a smaller dose until the effects on the sys are carefully developed —

AN ALLEGED CERTAIN CURE FOR A FELON.—The Buffalo (N. Y.) Commercial Advertiser has received the following, which is said to be a certain cure for a felon: "Take a pint of common soft soap, and stir in it air slaked lime till it is of the consistency of glazier's putty. Make a leather thimble; fill it with this composition and insert the finger therein, and change the composition once in twenty minutes, and a cure is certain." We happen to know that the above is a certain remedy and recommend it to any who may be troubled with that disagreeable ailment.

# STATE OF ILLINOIS BOARD OF PHARMACY.

SPRINGFIELD, March 14, 1885.

*To the Conference of Teaching Colleges of Pharmacy:*

It is understood by Pharmacists, and the proposition is accepted throughout the United States without question, that an apprentice should present satisfactory evidence of having been employed in a retail drug-store or pharmacy at least four years, and have attained legal manhood, in addition to attending lectures and passing prescribed examinations, before he may be entitled to a diploma or its equivalent from any reputable College of Pharmacy. The necessity of this experience has been recognized by your honorable body, and among the pledges necessary for a college to secure membership in your organization is that four years' practical experience in a drug-store will be required as a basis for graduation.

This Board has received applications of late for registration from persons claiming to be graduates in pharmacy, and who present as credentials what are termed "Certificates of Graduation" or "Minor Certificates" issued by Colleges of Pharmacy holding membership in your organization; inquiry developing the fact that the holder at the time of final examination was lacking in age or experience, and that these certificates were to be held until the age or experience is had when a diploma will issue. In one case the applicant was nineteen years of age! In another case from same college the applicant had an experience of about fifteen months, in a town of about three thousand inhabitants, at the time of passing final examination!

The Dean of the college referred to, in a conversation with the undersigned, claimed that every American college is doing this same thing, and seemed to think the writer's protest unwarranted.

Another applicant for registration as a graduate in pharmacy (from the same college) was in possession of the *diploma* of the Institution, yet declined to make affidavit that he had been engaged four years in the drug business, notwithstanding the fact that his application was dated a year later than the diploma.

From another college come applications from applicants under twenty-one years of age. The refusal of this Board to recognize such an one as a graduate in pharmacy within the meaning of the Illinois law elicits from the Recording Secretary of college referred to the following:

*Chas. W. Day, Esq.,*
*Secretary State Board of Pharmacy of Illinois, Chicago, Ill.,*

DEAR SIR: In accordance with instructions from the Board of Directors of the —— —— College of Pharmacy, I write to inform you that Mr. —— ——, now with —— ——, Esq., of your city, is a graduate of this college, Class 1883-4, and entitled to the diploma on attaining his majority. He holds the minor certificate of the college to that effect, and yet states that your Board refuse it recognition and will not register him. If, according to the rules of your Board, applicants for registration holding diplomas from regular Colleges of Pharmacy are entitled to registration without examination, we cannot understand *why* you refuse to recognize the aforesaid minor certificate, which is in effect equivalent to the diploma, so far as the holder's qualifications are concerned. Awaiting further information from you, I am very truly yours, —— ——,
*Rec. Secy., C. of Ph.*

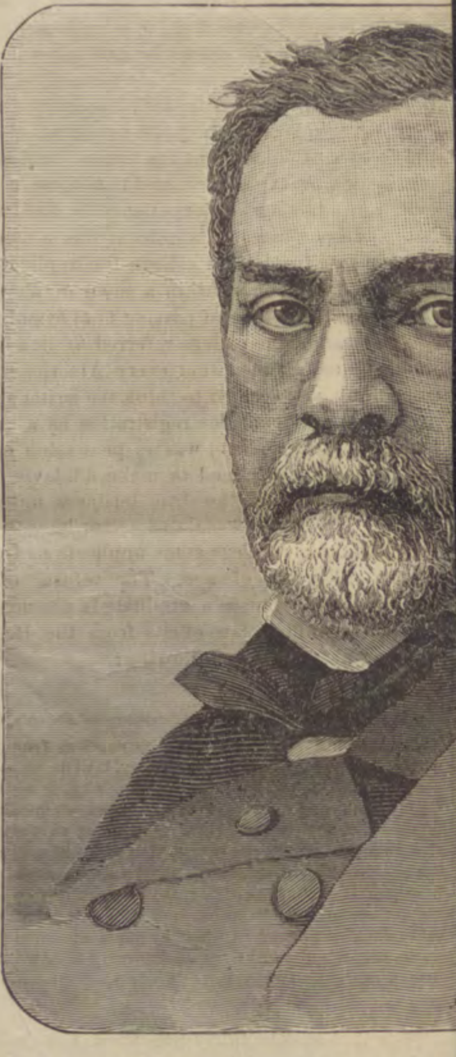
Now it should be fairly presumed, that in becoming eligible to and successfully passing the final examination, the full requirements of a college as a matter of fact have been complied with. The presentation of a diploma, certificate or other crodential should be the evidence of such compliance. There can be no question but that whatever experience or age is held to be necessary to make the applicant eligible to graduation should be had prior to final examination.

The Illinois Board of Pharmacy, in exercise of sound judgment and having at heart the best interests of pharmacy, will decline to grant registration to the holders of such certificates without examination, and if, after a reasonable time, the practice of issuing such certificates is uot abandoned, this Board will decline to accept as "Satisfactory" the diploma of any college following the practice. By order Illinois Board of Pharmacy,

CHAS. W. DAY, *Secretary.*

# M. LOUIS PASTEUR.

THIS eminent scientist and chemist, an excellent portrait of whom accompanies this sketch, is now in his sixty-third year, having been born in Dole, France, Dec. 27, 1822. His scientific studies were pursued at Dijon, and with such honor and promise hat a year after his graduation he was made Professor of Physical Sciences, and only a year later was called to Strasburg to accept the chair of Chemistry. In 1857 a call to Paris to the directorship of the Normal School was accepted, and for the past thirty ears he has been one of the leading investigators in the line of esearches in fermentation, microscopical life, and like scientific vork.



His labors have met with hearty commendation and his conclu-ons with general acceptance. In 1856 he received the Rumford old medal for his researches, in 1859 a prize for his researches fermentation, and in 1861 the Jecker prize for chemical investigations. In 1874 the French Government awarded him a pen-on of 20,000 francs per annum, and for later discoveries this m has been augmented so that his present income is said to be arly 150,000 francs per annum, and entailed to his wife and ildren.

Of late years the name of Pasteur has been identified with the bjects of fermentation and microbes. He made the discovery at glycerine was one of the products of fermentation, and his aims that fermentation cannot originate spontaneously are now nceded to be correct. His researches on fermentation have led new processes,—now generally adopted
